This article is about the free and open source alternative to AutoCAD, DraftSight. Pentaho Data Integration(PDI) is a data integration software suite developed by Pentaho, a division of Tibco Software. PDI is designed to import data from and export data to a wide range of data sources. Commonly, PDI is used in ETL (extract, transform and load) processing. The software is designed to be as intuitive as possible, to enhance user productivity and to be agnostic to the source of the data. It is available in a variety of editions. DraftSight is a free and open-source solution for creating and editing 2D vector graphics and images in the GIMP. Creating Vector Graphics with the GIMP 1. Go to the Image > Draw menu and choose the Vector Painter from the list of available tools. Vector Painter is the official name for the tool. 2. Click the “Create New Image” button to create a new image and open the GIMP’s canvas. 3. Drag a brush from the Brushes palette (F10) and place it over the image. Your brush should be selected (F9) and centered over the image (F10, F11). In this example, we will use a standard brush called “Digital Painting Brush”. A variety of other standard brushes are available. Click the “Load Brush” button to select the brush. 4. Start drawing your image with the Brush tool (F6, F7). When you’re ready, hit Enter (F10, F11) to end the brush stroke. 5. Keep drawing! The best and most common way to do this is to manually zoom in and out on the canvas using the controls (Z, S, I) in the toolbar. If you get lost, clicking the “Zoom In” or “Zoom Out” buttons in the toolbar will re-center the view. While you’re drawing, the image will fill up with black to indicate which pixels will be used to create the vector object. By clicking and dragging on the canvas with the Brush tool, you can change the brush’s direction and adjust its size and hardness (in both horizontal and vertical directions). To create a complex drawing, click and drag on the canvas to add more lines. You can use the

Business Intelligence AutoCAD includes Business Intelligence (BI) capabilities. Business Intelligence is the suite of analytical products for SQL Server that provides managers with detailed information on how business is performing. It is mainly used to design analyses on SQL Server databases. It is based on Oracle Business Intelligence. In 2010 it was discontinued, and was replaced by a partnership between Autodesk and Quest Software. The partnership is based on the fact that Autodesk owns the rights to the AutoCAD brand and Quest Software is Autodesk's BI partner. Rational Rose Rational Rose is an extension to Rational Rose Designer, and is provided on an annual subscription basis with AutoCAD. Rational Rose Designer is a software to design product flowcharts and production flows. Rational Rose Writer is a software to generate flows from designed flows.
