The selection of profiles is fairly good, but the conversion can be slow. The only real problems I encountered is that the preview was jerky when using the full screen or multiple file conversion. KeyMacro is a lightweight tool to create and edit keyboard macros. It enables you to quickly record and play macros that can be triggered by hot keys or other events. For instance, it's possible to have a macro that copies all of the selected text in a document to the clipboard. Another possibility is to paste the current selection, in case you want to duplicate the selected content. The program supports multiple types of hot keys. You can define the hot keys using the familiar Windows hot keys, i.e. Ctrl+Alt+Del, the F1-F12 keys, the Windows logo key, the Page Up/Page Down keys, the Home/End keys, and many other combinations of keys. Another kind of hot key is the Alt key. In this case, it is possible to define a macro that moves the cursor up or down or it may paste the content of the clipboard. The program can also be used to create other macros. For instance, you can insert a bullet list in a word processor document. By using a hot key or an event, you can choose to create a new list, copy the existing one, or paste the list from the clipboard. How to install KeyMacro A: Check out FastStone Image Viewer. It is available for Windows and Mac. It has many features that the other applications above don't have, including: In-place editing of 2D images with a large preview window. Layers (alpha channel, layer mask, etc.) Histogram, brightness/contrast adjustment Image import Filters (JPEG, GIF, PNG, etc.) Thumbnail creation Image rotation/flipping Histogram stats Image profile information (JPEG only) A: As far as I know (I haven't used any of these), Image Commander is Mac only (and by many accounts, it's Mac only for a long time). You can use it to preview/manipulate RAW files (which is a lot of files), and you can use it to edit/skew/rotate/change histograms and the like. 77a5ca646e
